Do You want a Cell Tower in Your Backyard?

(See attached diagram)

***OPPOSITION COURT HEARING, 16 Feb, 6 p.m., 601 E. Kennedy, 2nd Flr**

Quick Facts

There is significant proof from respected sources that RFR is harmful to people and more importantly children.

Almost EVERY school in Hillsborough County is eligible to get a tower without notification to the community. Do you want any child attending school where there is even the POSSIBILITY that the tower emissions have a harmful effect on health. You must evaluate all the evidence before placing students, staff and area residents at risk. THERE ARE DOCUMENTED occasions where the enclosures are left open causing safety hazards for the children.

Many people will avoid buying a house near a school with a cell tower because they fear the effect on their health. There is documentation: ADJACENT PROPERTY VALUES WILL DROP – SOME BECOME UNSELLABLE A cell tower on school property negatively affects property values of surrounding neighborhoods and areas zoned for attendance.

Cell Towers currently contribute \$143,000 to the entire school system which amounts to 0.008% of the annual school budget. This is 80 cents/student per year. Is it worth the long term negative health affects?

A cell tower at this location will be very much out of scale with the surroundings, detracting from the natural aesthetics of the area. Potential buyers will opt for homes elsewhere without cell tower complications.

**Schools are a place for learning and safety.
Schools should NOT be used as a business.**

- **Please, do your research: don't take industry claims as fact**
- **Their focus is to place towers, with no regard for public interest or safety**
- **They plan to place cell towers on over 230 Hillsborough County school properties immediately.**
